Coarse geometry of Anosov representations

Joan Porti

Universitat Autònoma de Barcelona

Anosov representations where introduced by Labourie for surface groups, and Guichard and Wienhard for Gromov hyperbolic groups. I plan to discuss the coarse geometry of the image groups acting on symmetric spaces, and I'll try to compare it to convex cocompact Klenian groups acting on hyperbolic spaces. This is joint work with Misha Kapovich and Bernhard Leeb.
