Topological Invariants of Stratified Spaces

Markus Banagl

Mathematisches Institut, Universität Heidelberg, Im Neuenheimer Feld 288, 69120 Heidelberg, Germany
E-mail address: banagl@mathi.uni-heidelberg.de

Key words and phrases. Sheaf theory, derived categories, triangulated categories, homological algebra, singular spaces, stratifications, intersection homology, bordism, surgery theory, characteristic classes, signature, perverse sheaves

The author was in part supported by NSF Research Grant DMS-0072550, NSF Research Grant DMS-0305113, and by a Charles Phelps Taft Memorial Fund Grant.

Contents

Preface v

Chapter 1. Elementary Sheaf Theory 1
1.1. Sheaves 1
1.2. Sheaf Cohomology 7
1.3. Complexes of Sheaves 17

Chapter 2. Homological Algebra 23
2.1. The Homotopy Category of Complexes 23
2.2. Triangulated Categories 24
2.3. The Triangulation of the Homotopy Category 28
2.4. Derived Categories 34

Chapter 3. Verdier Duality 51
3.1. Direct Image with Proper Support 51
3.2. Inverse Image with Compact Support 53
3.3. The Verdier Duality Formula 56
3.4. The Dualizing Functor 57
3.5. Poincaré Duality on Manifolds 59

Chapter 4. Intersection Homology 61
4.1. Piecewise Linear Intersection Homology 61
4.2. Deligne's Sheaf 79
4.3. Topological Invariance of Intersection Homology 80
4.4. Generalized Poincaré Duality on Singular Spaces 83

Chapter 5. Characteristic Classes and Smooth Manifolds 85
5.1. Introduction 85
5.2. Smooth Oriented Bordism 86
5.3. The Characteristic Classes of Chern and Pontrjagin 86
5.4. The Rational Calculation of Ω_*^{SO} 87
5.5. Surgery Theory 93
5.6. The L-Class of a Manifold: Approach via Tangential Geometry 101
5.7. The L-Class of a Manifold: Approach via Maps to Spheres 103

Chapter 6. Invariants of Witt Spaces 107
6.1. The Signature of Spaces with only Even-Codimensional Strata 107
6.2. Introduction to Whitney Stratifications 111
6.3. The Goresky-MacPherson L-Class 115
6.4. Witt Spaces 116
6.5. Siegel's Calculation of Witt Bordism 118

6.6. Application of Witt Bordism: Novikov Additivity 120

Chapter 7. T-Structures 123
7.1. Basic Definitions and Properties 123
7.2. Gluing of t-Structures 132
7.3. The Perverse t-Structure 138

Chapter 8. Methods of Computation 141
8.1. Stratified Maps and Topological Invariants 141
8.2. The L-Class of Self-Dual Sheaves 162
8.3. The Presence of Monodromy 182

Chapter 9. Invariants of Non-Witt Spaces 191
9.1. Duality on Non-Witt Spaces: Lagrangian Structures 191
9.2. L-Classes of Non-Witt Spaces 202
9.3. Stratified Maps 203
9.4. The Presence of Monodromy 210

Chapter 10. L^2 Cohomology 213

Bibliography 219

Index 223
